Awnings/Blade Sign Attachment Information

(5/09)

Issues to consider when developing attachment details:

1. Most storefronts have EIFS. Therefore, awnings cannot be screwed directly into the storefront. Screwing directly to the storefront will void the warranty of the storefront assembly.
2. Blade sign size, weight and projections need to be factored into the design. Support blocking may be required.
3. Blade signs cannot be mounted directly over the eifs. The rigid insulation board will not support any weight.
4. For stone or brick facades, penetrations must be made at grout lines and not through building materials.
