

Gas Service

Burlington Malls Sears Redevelopment

This bulletin contains information for gas service for restaurants only. Gas is not provided for retail use. Gas manifolds and line routing for this project are located on the building plans. Routing for the lines will vary depending on the designated loading dock.

Setting up an Account

To set up a gas account, the Tenant must contact **Nationalgrid** Customer Service Dept. This is a transfer of an existing meter into Tenant's name. This account can be set up in advance of completing any gas line work and strongly suggest this is completed early. They will require the following information:

- Name of Company
- Billing name
- Address
- Tax ID number
- Email of responsible party
- Phone number of responsible party
- Meter Number

Activation of Gas Meter

The Tenant's General Contractor will need to complete the following steps to activate gas meter.

- General Contractor to complete the gas line installation per Simon's routing plan. Confirm route to your manifold with Field TC.
- General Contractor to complete an inspection by the Town of Burlington Building Dept plumbing inspector.
- Once inspection is approved, Tenant to call National Grid Customer Service Dept to have meter set or activated. Have your account number. This process can take 2 to 3 days.

The plumber will install code-specified pipe secured to service yard walls and over the roof leading back to Tenant spaces. All exterior gas lines mounted on walls need to be painted to match the surrounding area and gas lines on top of the roof need to be painted a bright cautionary yellow and be supported by approved stands. The lines will need to be labeled as "gas lines" and identified with store number using exterior grade vinyl lettering every 40feet. Tenants requiring gas will need to route it through their respective shafts as needed
